

Eslam Nasr Ahmad Abdel Aal

Junior Backend Developer (.NET)

Cairo, Egypt | +20 111 755 4969 | eslamnasr413@gmail.com | [LinkedIn](#) | [GitHub](#) | [YouTube](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Junior Backend Developer with hands-on experience building structured, layered systems in C# and .NET. Focused on clean architecture, business logic separation, and reliable database design using SQL Server and ADO.NET. Experienced in applying DTO and Result patterns, async programming, role-based authentication and authorization, and designing normalized relational databases.

TECHNICAL SKILLS

Languages: C#, C++, SQL

Backend: ADO.NET, LINQ, DTO Pattern, Layered Architecture, Authentication & Authorization, Async/Await, OOP, ASP.NET Core, .NET Framework, RESTful APIs

Database: SQL Server, Relational DB Design, Data Modeling, Stored Procedures, DB Relationships

Tools: Visual Studio, Git, GitHub, WinForms

PROJECTS

DVLD — Driver & Vehicle Licensing Department System

C#, .NET Framework 4.7.2, SQL Server, ADO.NET, WinForms

github.com/BackendMindset/DVLD-System

- Designed a normalized SQL Server database with 29 tables, 4 views, and 46 foreign keys — covering people, drivers, licenses, applications, tests, medical centers, payments, violations, roles, and permissions.
- Built a Business Layer with 28 service classes enforcing real-world rules — license issuance conditions, test scheduling eligibility, international license requirements, workflow transitions, and detained license management.
- Implemented DTO Pattern, Result Pattern, and a mapping layer across all three layers; backed by 60 DAL classes (~36,300 total lines of code) covering full async ADO.NET CRUD for every entity.
- Delivered a complete WinForms UI with 52 forms — 17 Manage, 11 Add/Edit, 12 Details/History, and 11 workflow/dialog screens — with 9 reusable UserControls and a menu-driven main shell.
- Secured authentication with PBKDF2 password hashing and AES-256 credential encryption; integrated a thread-safe logger, global exception handling, and a reusable FilterHelper for real-time grid search.

ATM Management System

C++, OOP, File Handling

github.com/BackendMindset/ATM-System-CPP

- Implemented user authentication, account management, and transaction processing workflows.
- Applied modular architecture, separation of concerns, and file-based data storage.
- Demonstrated transition from procedural to object-oriented design patterns.

Data Structures Library

C++

github.com/BackendMindset/DataStructures-CPP

- Implemented Dynamic Array, Linked List, Stack, Queue, and String Utilities from scratch.
- Strengthened understanding of algorithms, memory management, and software engineering fundamentals.

C++ Problem Solving Repository

C++

github.com/BackendMindset/CPlusPlus-Problem-Solving

- Structured collection covering matrices, strings, date algorithms, and client system applications.
- Demonstrates algorithmic thinking, problem decomposition, and clean function design.

EDUCATION

Bachelor's Degree in Education — Mathematics Department

Beni-Suef University | Graduation Year: 2026

Self-Taught Backend Developer — Mathematical background strengthens analytical and problem-solving skills

TECHNICAL CONTENT & TRAINING

YouTube — Backend Mindset: Educational content on C#/.NET, SQL Server, OOP, and Backend Architecture.

Training Background: Built core programming and backend foundations through the intensive ProgrammingAdvices roadmap (programmingadvices.com), under the mentorship of Eng. Mohammed Abu-Hadhoud.

Languages: Arabic — Native | English — Good Working Proficiency
